

Rest Countries API Project

A simple and interactive Country Information Finder built using HTML, CSS, and JavaScript. This project fetches real-time country data from the REST Countries API and displays important details like name, capital, flag, population, region, maps link, and more.

Project Overview

This web application allows users to search for any country by name and instantly view detailed information about it. By default, the app loads data for India (Bharat) when the page is opened. The project focuses on API integration, DOM manipulation, and dynamic UI updates.

Features

- Search country by name
- Fetch real-time data from REST Countries API
- Display country flag
- Show capital, region, and sub-region
- Population and total area details
- Google Maps redirect link
- Continent and borders information
- Fast and lightweight application

Technologies Used

- HTML5
- CSS3
- JavaScript (Vanilla JS)
- REST Countries API

Project Structure

index.html – Main HTML file

style.css – Styling file

script.js – JavaScript logic and API handling

README.md – Project documentation

How to Run the Project

1. Download or clone the repository
2. Open the project folder
3. Open index.html in any modern browser
4. Enter a country name and click Search
